

Jaw Motion and Joint Rehabilitation

The OraStretch Press Jaw Motion Rehab System

Trismus Therapy for Limited Openings:

Trismus can be very difficult to treat, especially when caused by radiation. Preventing its development is imperative for the long-term functionality and quality of the patients recovery.

- Jaw motion rehab devices are 40-60% more effective in treating trismus than other therapies.
- Therapy and stretching are less effective in treating radiation induced trismus after it has occurred.
- Preventative early rehabilitation can reduce incidence (by 40%) and severity (by 60%) of trismus from radiation and surgery.

Rehabilitation Therapies:

The OraStretch press provides therapeutic motion to the jaw and joint to prevent trismus and rehabilitate joint dysfunction. Motion from the OraStretch press effectively treats TMJ disorder, joint dysfunction, trismus, and facial muscle spasms.

Patient System Includes:

- OraStretch press device
- 2 bitepad sets (4 pads)
- Safety limit screw
- Patient ROM Scale
- Device Manual
- Getting Started Brochure
- Blue Carrying Case

The OraStretch Press Device

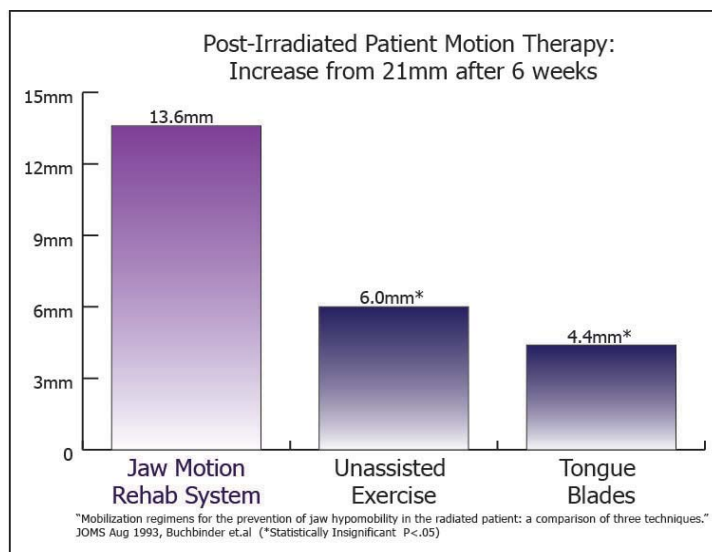

The OraStretch press provides a curved, natural stretch to treat and rehab the jaw and joint; and includes:

- Full natural jaw rotation.
- Small, lightweight size.
- Easy to squeeze design.
- Intuitive side scale.
- Adjustable safety limit.
- Spreads pressure.

OraStretch Press Benefits:

- **Prevention of fibrosis** from surgery or radiation.
- **Treatment of trismus** for increased range.
- Improved jaw & joint function.
- Reduced swelling and pain.
- **Free Size Exchanges*** & discounted pads.
- **Lifetime warranty***

Jaw rehab systems are significantly more effective to increase jaw more than self exercise or tongue blades.

CranioRehab Benefits:

- Discounts for No Coverage, Medicaid, Hardship, and Replacements.
- Expert, Specialized Service.

- Insurance Handling & Expertise: Billing, Pre-Auth's, and Appeals.
